TODAY'S TIP

Category: Microsoft Excel

Find Missing Arguments

There's no way most of us can memorize all the arguments for every function. When you type a function name in a cell, press Ctrl+A, and Excel will display the formula palette. This palette displays all the possible arguments you'll need to supply. You'll even find a bit of an explanation about the argument. Furthermore, the palette will display the function's results, so you can check the accuracy of your function before pressing Enter.
